Outline

BJC: Out-of-phase changes in meridional OHT and AHT

- **Fundamentals**
- **Questions**
- **Hypothesis and Theory**
- **CGCM results**
- **Aquaplanet**
- **Summary**

Fundamentals

Heat Budget at the TOA

Energy

$$Energy = c_p T + L_v q + gz + \frac{(u^2 + v^2 + w^2)}{2}$$

- **Sensible Heat / Latent heat**
 - **Potential energy / Kinetic energy**
1. **Kinetic energy transport is small**
 2. **In the ocean only sensible heat transport**

Fundamental Questions

Energy Transport Mechanisms

Energy multiply by meridional mass transport

$$F_E = \Psi C \Delta E$$

- Hadley Cell
- Ferrell Cell
- AMOC
- Wind-driven STC

- Monsoon Circulation
- Oceanic Gyres

Eddies:

- Standing Waves
- Transient Storms
- Instability Waves
- Gulf Stream Rings...

Fundamental Questions

Ocean Heat Transport Calculation

Temperature equation

$$\frac{\partial T}{\partial t} + \frac{\partial(u + u^* + u')T}{\partial x} + \frac{\partial(v + v^* + v')T}{\partial y} + \frac{\partial(w + w^* + w')T}{\partial z} = R(T) + D_v(T) + \frac{\partial Q}{\partial z}$$

Zonal and Vertical Integration

$$\iiint \frac{\partial T}{\partial t} dx dy dz + \iint (v + v^* + v')T dx dz = \iiint R(T) dx dy dz + \iint Q_0 dx dy,$$

Storage

OHT_{VT}

OHT_{diff}

OHT_{HF}

OHT_{eul} + OHT_{bol} + OHT_{sbm}

Ocean Heat Transport Calculation

$$\text{OHT} = \text{OHT}_{\text{VT}} = \text{OHT}_{\text{eul}} + \cancel{\text{OHT}_{\text{bol}}} + \cancel{\text{OHT}_{\text{sbm}}} = \text{OHT}_{\text{HF}} + \cancel{\text{OHT}_{\text{diff}}} - \cancel{\text{Storage}}$$

No Submesoscale Eddies Equilibrium

No Mesoscale Eddies No Mixing

$$\text{OHT}_{\text{VT}} \approx \text{OHT}_{\text{HF}} \approx \text{OHT}_{\text{eul}}$$

Calculation in CGCM

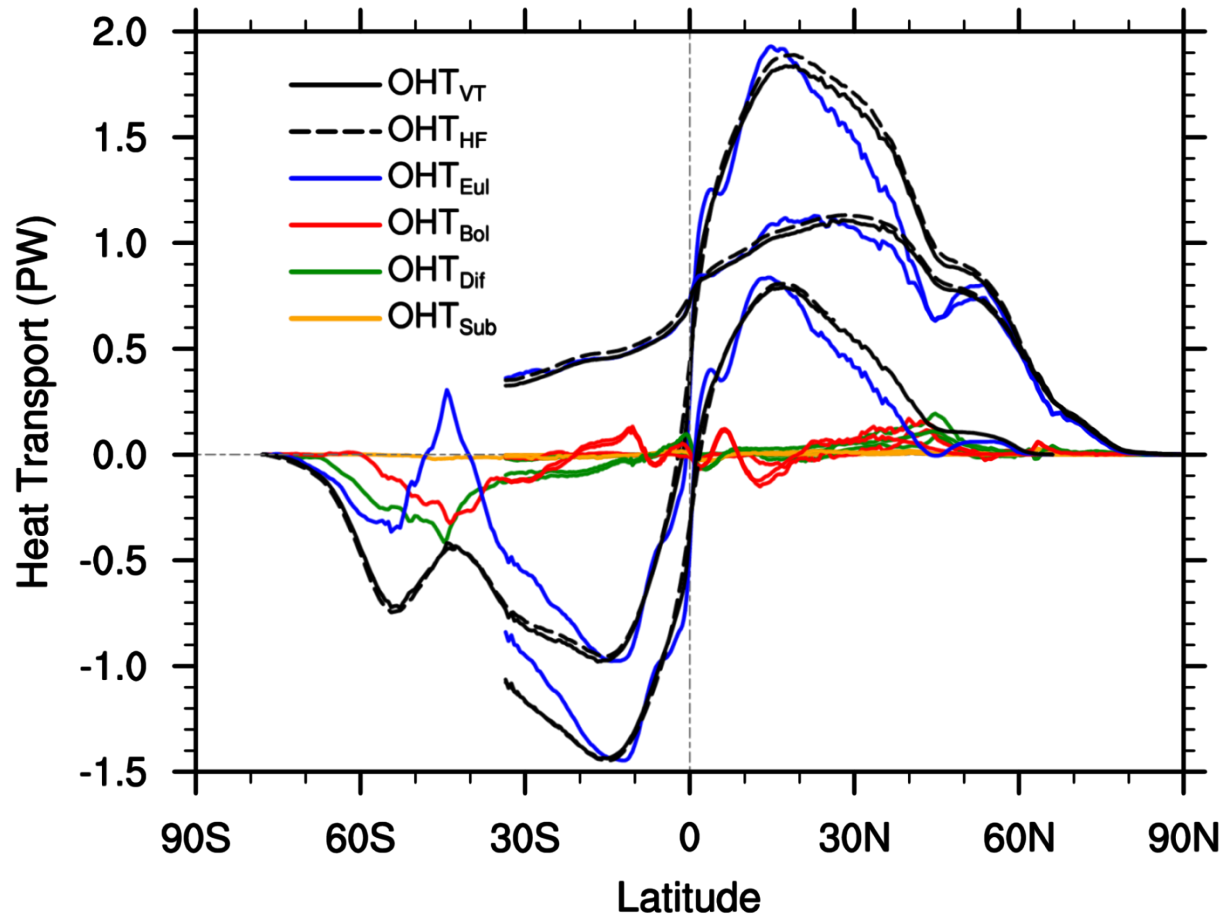

- ◇ **Real** heat transport by **Atmosphere** and **Ocean**
- ◇ OHT components:
 - ◇ Basin contribution / Wind-driven / Thermohaline
- ◇ AHT components:
 - ◇ **Dry air** VS. **Water vapor** / **Mean** VS. **Eddies**

Meridional Heat Transport

Dotted lines from Obs. Heat Flux (Trenberth and Caron, 2001)

Decomposing OHT_{VT}

Consistency between OHT_{VT} and OHT_{HF}
Important role of Bolus and dissipation in ACC

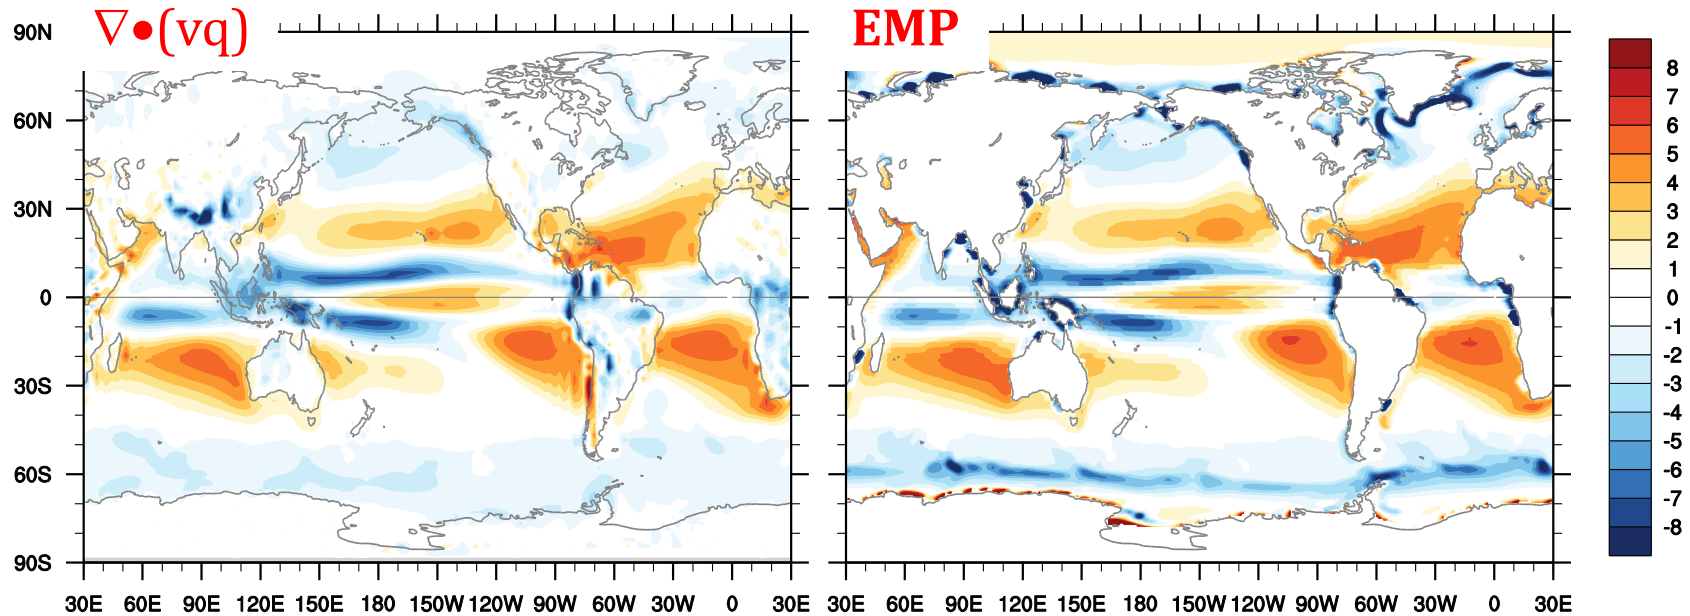

Yang and Li (2015)

Decomposing AHT_{VT}

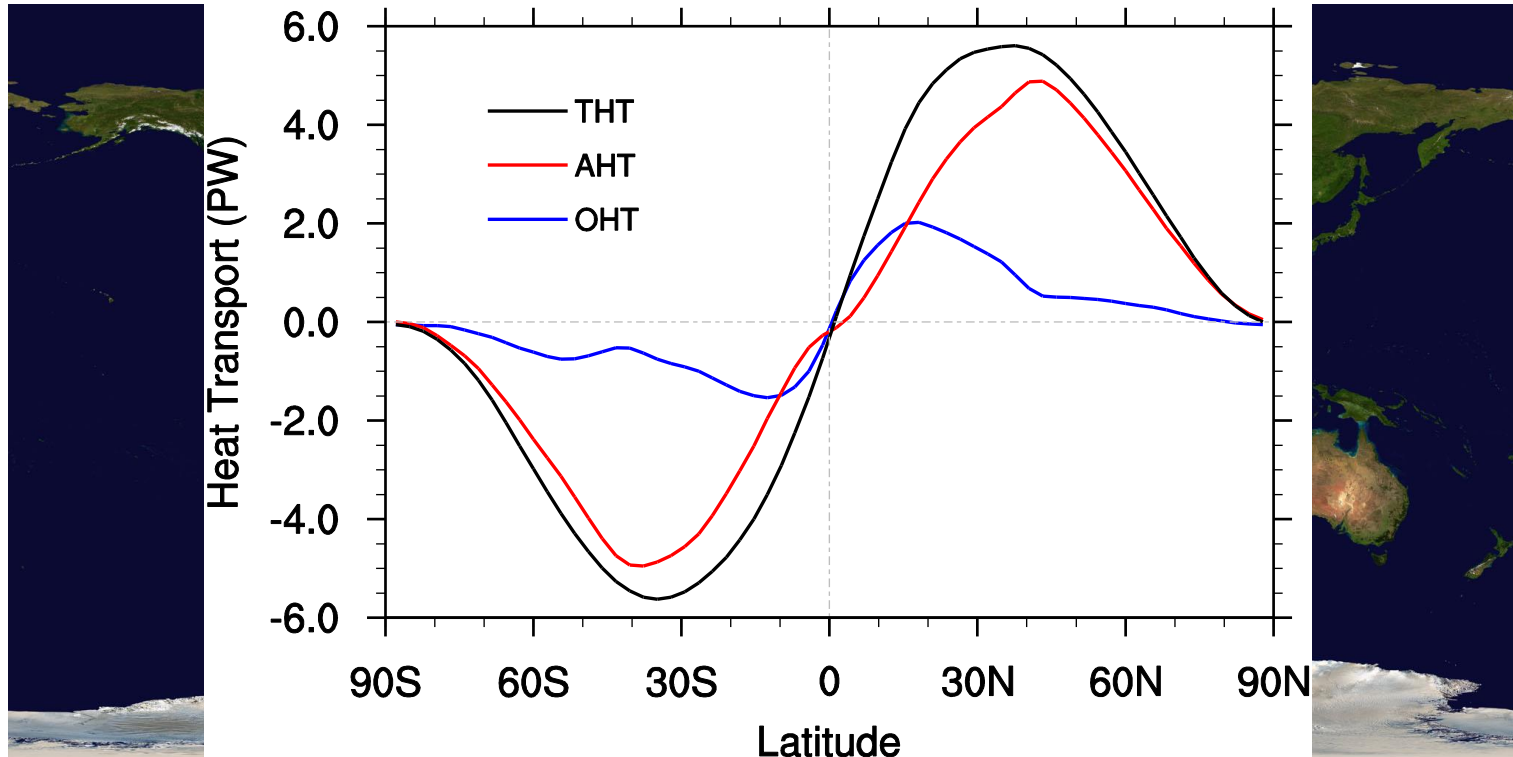

Divergence of Water Vapor Transport

- Vertically integrated water vapor divergence $\nabla \cdot (vq)$
- Comes from EMP over the global ocean (unit: $10^{-5} \text{ kgm}^{-2}\text{s}^{-1}$)

Fundamental Questions

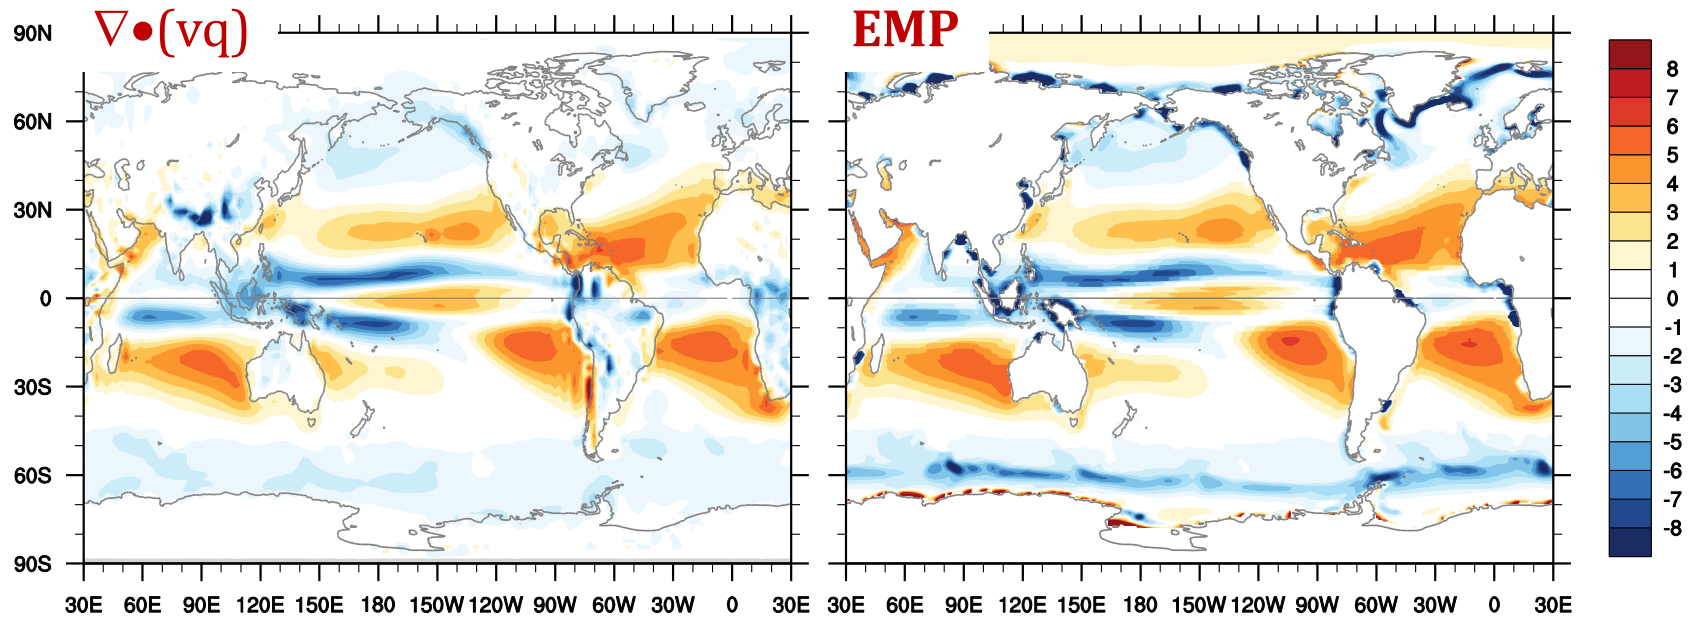

1. Antisymmetric MHT?

Aquaplanet → Real Earth

Trenberth and Caron (2001)

2. “Real” Oceanic Contribution?

Yang and Li (2015)

Fundamental Questions

3. Relationship between OHT and AHT Changes?

Earth Climate Stability Mechanism

Climate Change during Past 22 kyr

Timmermann (2009), Science

MHT from CCSM3 simulation TraCE-21K, From LGM to present

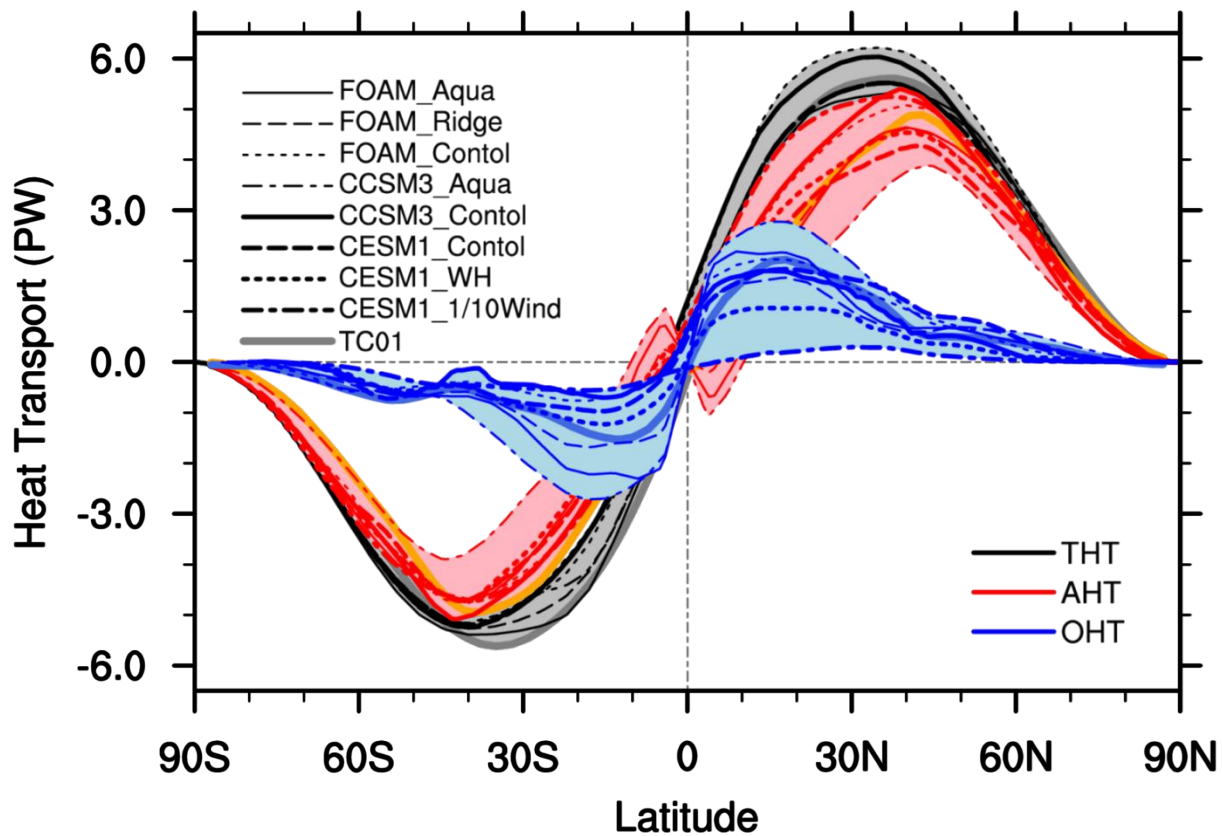

Liu et al. (2009); He (2011)

MHTA Change Since LGM

Yang et al. (2015)

Compensation between AHT and OHT

Note: TC01 is from Trenberth and Caron (2001)

Hypothesis: Bjerknnes Compensation

Jacob Aaal Bonnevie Bjerknnes
1897-1975

FIG. 48. Solid lines: flux data from Fig. 47 pertaining to present climatic conditions. Dashed lines refer to a sketchy model of the conditions around 1800 A.D. and show qualitative estimate of curtailed Atlantic and total oceanic heat flux as well as increased heat flux by low index atmospheric circulation. The anomalies of heat flux in oceans and atmosphere are assumed to cancel, leaving total heat flux and radiation budget unchanged. Actually, some change in the radiation budget is also likely to have taken place, but it could well have been quite small.

Bjerknnes, 1964: Atlantic Air-Sea Interaction, *Advances in Geophysics*, Vol. 10, P77

Hypothesis: Bjerknes Compensation

Question: How Climate Feedback Determines BJC?

$$A + B = 0 \rightarrow A = -B$$

but $A + B + C = 0$

C: climate feedback

Then $A = -(B + C)$

Energy Conserved

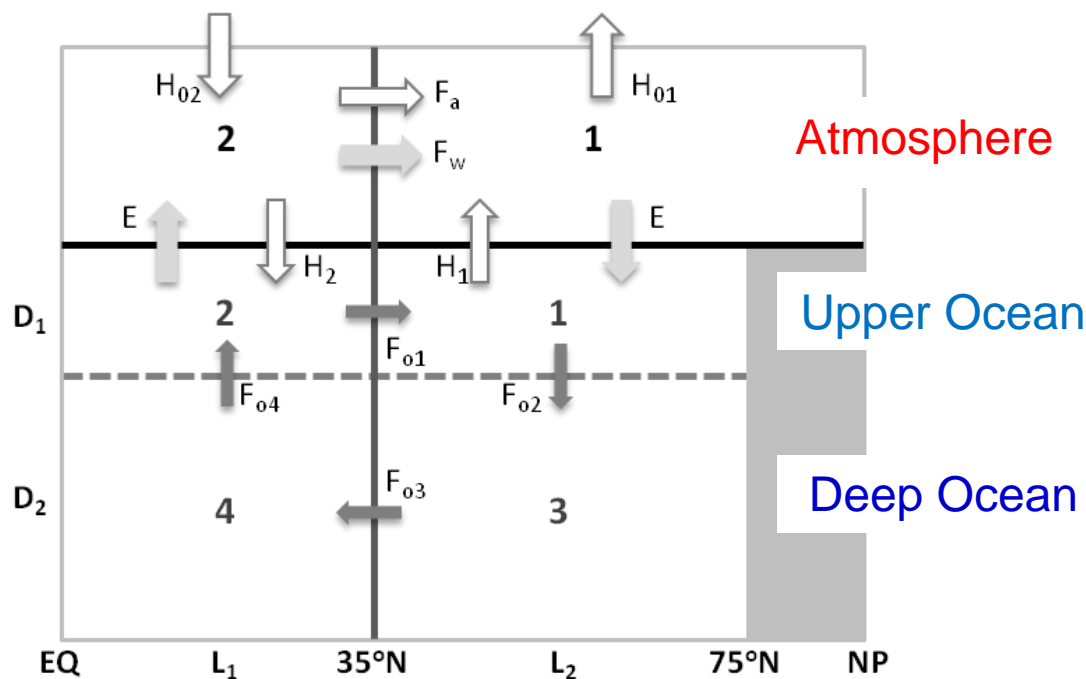

Theory for **Equilibrium** Change

- 1. Coupled Multi-Box Model**
- 2. 1-D Energy Balance Model (EBM)**

Go to Final Equations

Coupled Multi-Box Model

Yang, Zhao and Liu, 2016: Understanding Bjerknes compensation in atmosphere and ocean heat transports using a coupled box model. *J. Climate*

Go to Final Equations

Equations and Dynamics

$$T_1 \dots T_2 \dots T_3 \dots T_4 \dots$$

$$S_1 \dots S_2 \dots S_3 \dots S_4 \dots$$

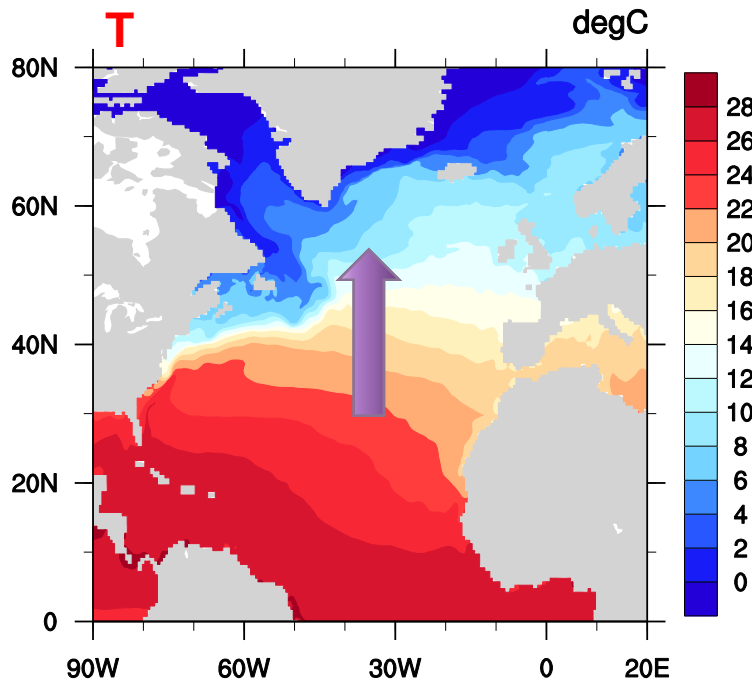

$$\text{Heat Flux at TOA: } H_{1,2} = A_{1,2} - B_{1,2}T_{1,2}$$

$$\text{Fresh Water Flux: } H_{fw} = \gamma(T_2 - T_1)$$

$$\text{Thermohaline: } q = \kappa[\alpha(T_2 - T_1) - \beta(S_2 - S_1)]$$

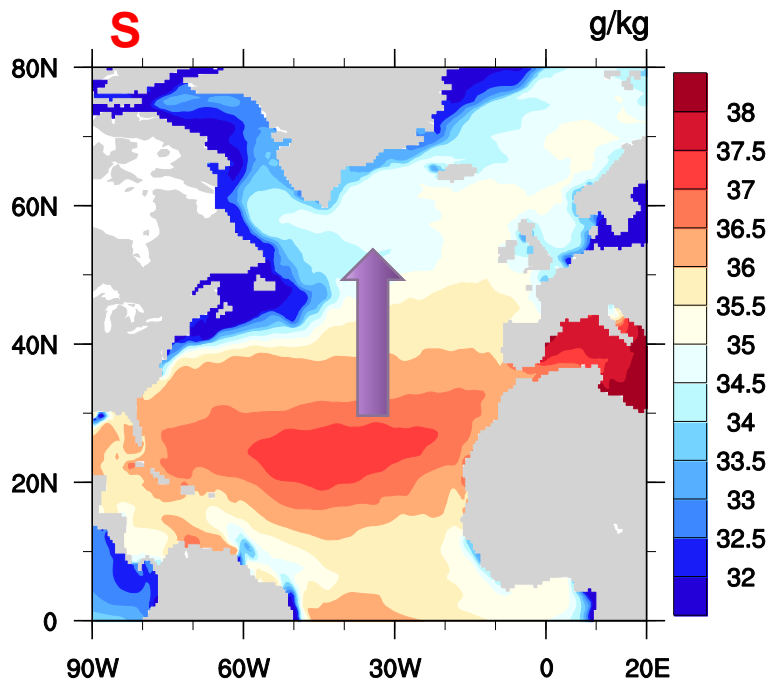

$$\text{AHT: } H_d \sim (T_2 - T_1) \quad \text{OHT: } O_d \sim q^*(T_2 - T_1)$$

Negative Feedback: *THC* vs *T*

Willebrand (1993)

Positive Feedback: *THC* vs *S*

Willebrand (1993)

Positive Feedback: *THC* vs *EMT*

EMT: Atmosphere Eddy Moisture Transport

Nakamura et al. (1994)

Analytical Solution: BJC Rate

$$C_R \equiv \Delta H_a / \Delta H_o = -(B_1 + B_2)\chi / [B_1 B_2 + (B_1 + B_2)\chi]$$

if $B_1 = B_2$

$$C_R = -1 / [1 + B/2\chi] < 0 \sim \text{Intrinsic Rate}$$

Intrinsic parameters:

- $B_{1,2} \sim$ Local feedback between T and HF at TOA
- $\chi \sim$ Atmospheric heat transport efficiency.

Intrinsic Rate

<1 , if $-B_1, -B_2 < 0$, Undercompensation

$|C_R| = 1$, if $B_1 B_2 = 0$, Full Compensation

>1 , if either $-B_1$ or $-B_2 > 0$, Overcompensation

$B_{1,2} \sim$ Local climate feedback **VITAL!**

1-D Slab-Ocean Energy Balance Model

Liu, Yang, He and Zhao, 2016: A theory for Bjerknes compensation: the role of climate feedback. J. Climate

Non-dimensional Equation

$$\partial_{xx}[M(x)T] - b(x)T + f(x) = 0, \quad \text{for } 0 < x < 1$$

With Non-dimensional OHT and AHT

$$f(x) = -\partial_x H_O,$$

$$H_A = -\partial_x [M(x)T].$$

Stommel (1961); North, (1975)

Analytical Solution: BJC Rate

Intrinsic Rate

$$C_R \equiv \Delta H_a / \Delta H_o = -1 / [1 + B / (n\pi)^2] < 0, n=1, 2, \dots$$

- B ~ Intrinsic parameter, Local feedback between T and HF at TOA
- n ~ Forcing scale.

Coupled Intrinsic Mode

Thermohaline-Climate Feedback-Energy Balance

$$C_R \equiv \frac{\Delta F_a}{\Delta F_o} = -\frac{1}{1-B} < 0$$

Local climate feedback $B(y)$

Yang, Zhao and Liu (2016)
Zhao, Yang and Liu (2016)

Climate Feedback + MHT → Earth Energy Balance

Coupled Intrinsic Mode

能量补偿 \Leftrightarrow 体重保持

饮食
(海洋)

新陈代谢
(气候反馈)

运动
(大气)

$$C_R = -\frac{1}{1-B}$$

Go to BJC for Climate Variability

Go to Outline

Intrinsic Rate

$$C_R = -(B_1 + B_2)\chi / [B_1 B_2 + (B_1 + B_2)\chi]$$

Mean Climate

How BJC Occurs: Fresh Water

Climate Change under Fresh Water

BJC under Negative Feedback

Compensation Rate: Constant!

Under-Compensation ($-B_{1,2} < 0$)

Climate Change under Fresh Water

Full Compensation (-B1=0, Zero Feedback)

Overcompensation (-B1=0.5, Positive Feedback)

Modeling MHT and OHT in Past 22ka

Freshwater Forcing

Salinity Change

Temperature Change

AHT and OHT

BJC = -1.5

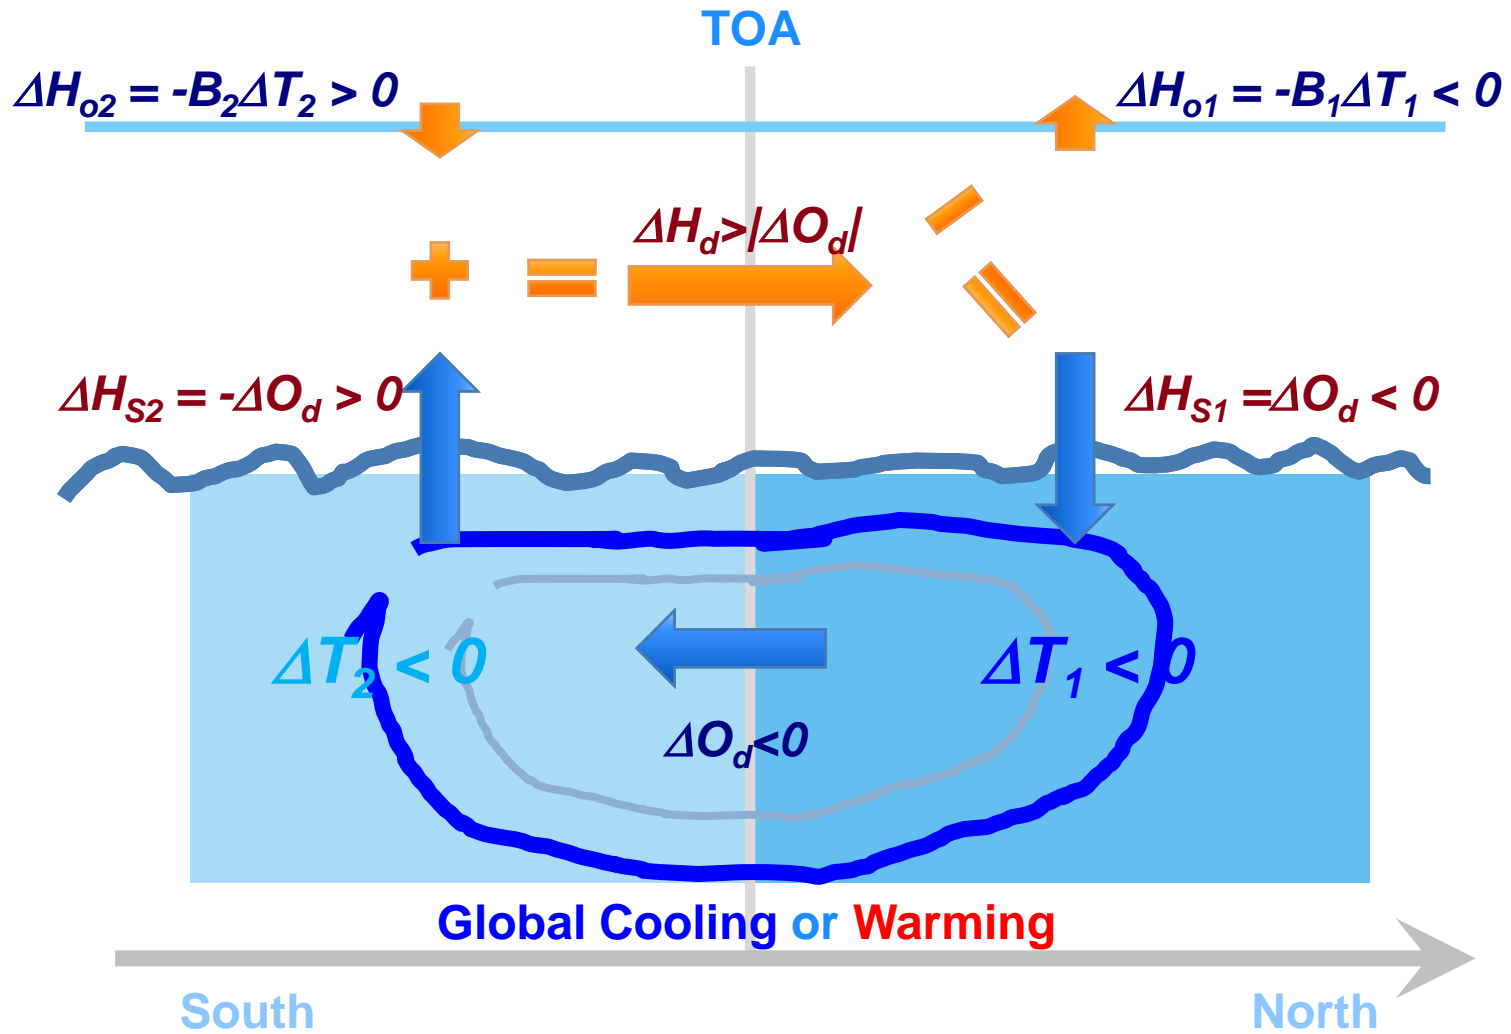

Mechanism for Undercompensation

Mechanism for Full compensation

Mechanism for Overcompensation

Will BJC Occur under Heating?

Analytical Solution: BJC Rate under Heating

$$C_h \equiv \Delta H_a / \Delta H_o = \left\{ 1 / [1 + (B_2 - B_1) \Delta A / \Delta T_s [B_1 B_2 + (B_1 + B_2) \chi]] \right\} C_R$$

if $B_1 = B_2$ global uniform feedback

$$C_h = C_R < 0$$

“BJC Rate” under Heating

No thermohaline dynamics → No Compensation!

Why **No** BJC under Heating?

$$q \sim T_s \rightarrow O_d \sim q * T_s \sim T_s * T_s$$

Why **No** BJC under Heating?

$$q \sim T_s \rightarrow O_d \sim q * T_s \sim T_s * T_s$$

$$C_q \equiv \Delta H_a / \Delta H_o = H_a / 2H_o$$

No Compensation! $C_q > 0$ & $C_q \sim \text{Constant}$

No thermohaline dynamics

BJC Possible under Freshwater + Heating?

Valid for weak heating

Positive Feedback: $S1 \uparrow \rightarrow THC \uparrow \rightarrow S1 \uparrow \rightarrow THC \uparrow \rightarrow T_s \downarrow$

CO2 since the LGM

Since LGM: $1.5 \times 10^{-4} \text{ W/m}^2/\text{year}$ (Shakun et al., 2012)

Since 1770: $1 \times 10^{-2} \text{ W/m}^2/\text{year}$ (IPCC, 2007)

Climate Variability and BJC in CESM

Define:

$$C_R \equiv r \frac{\sigma_{F_a}}{\sigma_{F_o}}$$

(1)

Theory for **Transient** Climate Variability

$$\begin{aligned}\dot{T}_s &= \frac{1}{\epsilon c \rho_0 D_1} [(A_2 - A_1 - B T_s) - 2\chi T_s] - 2q T_s, \\ \dot{S}_s &= \frac{2S_0}{\epsilon_w D_1} \gamma T_s - 2q S_s + h_{fw}.\end{aligned}$$

Linearization: $T = \bar{T} + T'$ and $S = \bar{S} + S'$

$$\frac{\partial}{\partial t} \begin{pmatrix} T'_s \\ S'_s \end{pmatrix} = M \begin{pmatrix} T'_s \\ S'_s \end{pmatrix} + \begin{pmatrix} 0 \\ h_0 e^{i\omega t} \end{pmatrix}$$

If $h_{fw} = \text{const.} \rightarrow C_{R0} = -\frac{1}{1+B/2\chi} \quad (2)$

BJC for Climate Variability

Zhao, Yang and Liu, 2016: Assessing Bjerknes compensation for climate variability and its timescale dependence. *J. Climate*

$$C_{Rp} \equiv \frac{F'_a}{F'_o} = \text{Re}(C_{R0}e^{i\delta}) = r_\delta * C_{R\omega}$$

$$r_\delta \equiv \cos\delta = -\frac{F}{\sqrt{\omega^2 + F^2}}$$

$$C_{R\omega} = \frac{2\chi}{\epsilon c \rho_0 D_1 \sqrt{\omega^2 + F^2}}$$

=

$$C_R \equiv r \frac{\sigma_{F_a}}{\sigma_{F_o}}$$

$\omega \rightarrow 0$

$$C_{R0} = -\frac{1}{1 + B/2\chi}$$

BJC for Climate Variability

$$\omega \rightarrow \infty \Rightarrow r_{\delta} \rightarrow \mathbf{0}; C_{R0} \rightarrow \mathbf{0}; C_{Rp} \rightarrow \mathbf{0}$$

No correlation and No BJC

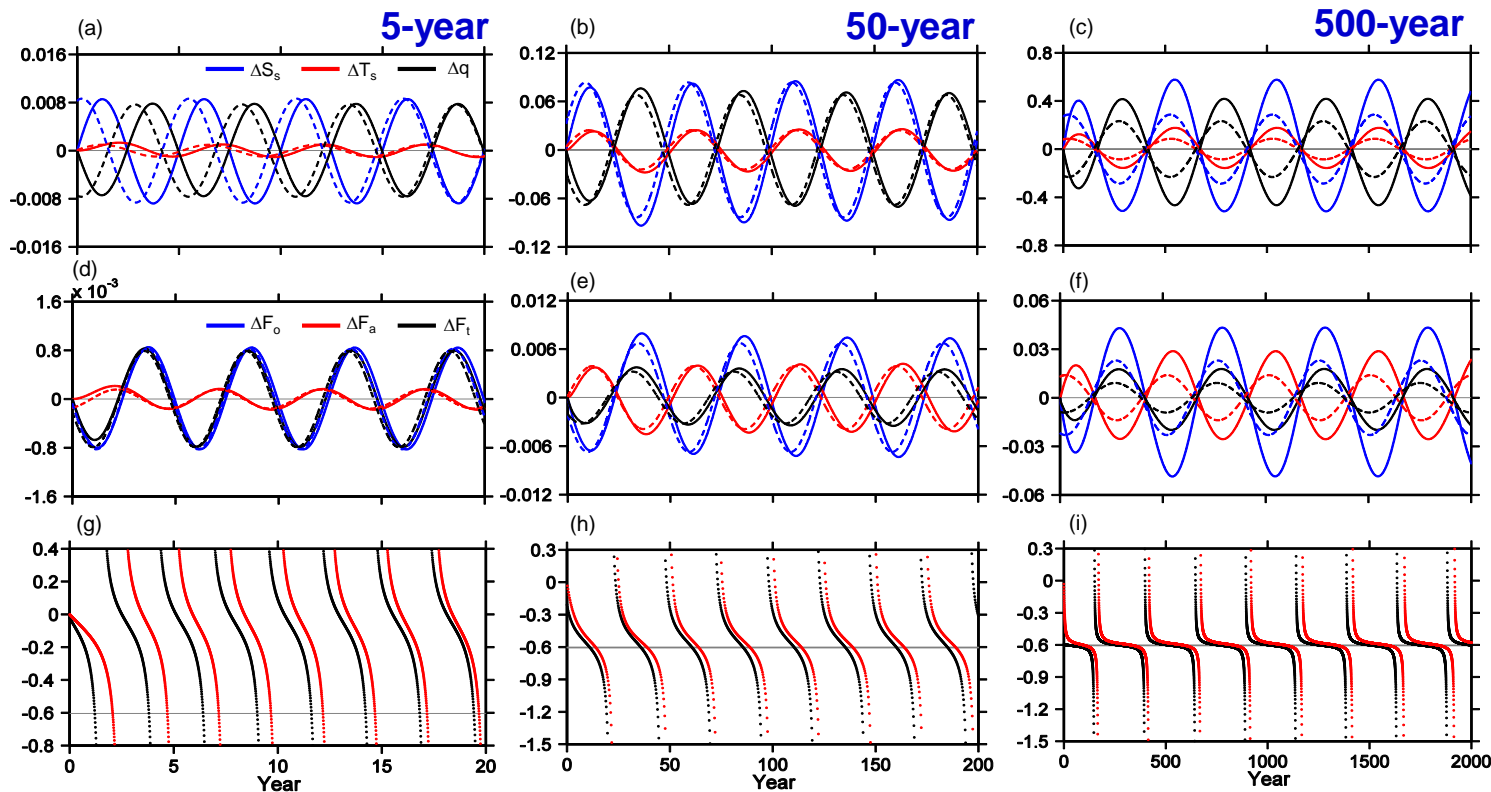

$$\omega \rightarrow \mathbf{0} \Rightarrow r_{\delta} \rightarrow \mathbf{-1}; C_R(\mathbf{1}) \approx C_{R0}(\mathbf{2}) \approx C_{Rp}(\mathbf{3})$$

Full correlation and equilibrium BJC

Go to Climate Variability Validation

BJC for Climate Variability

Under periodic forcing: $h_{fw} = \text{Re}(h_0 e^{i\omega t})$

BJC for Climate Variability

Under stochastic forcing: $h_{f\omega} = h_0 \int_{\omega=0}^{\omega=\infty} e^{i\omega t} d\omega$

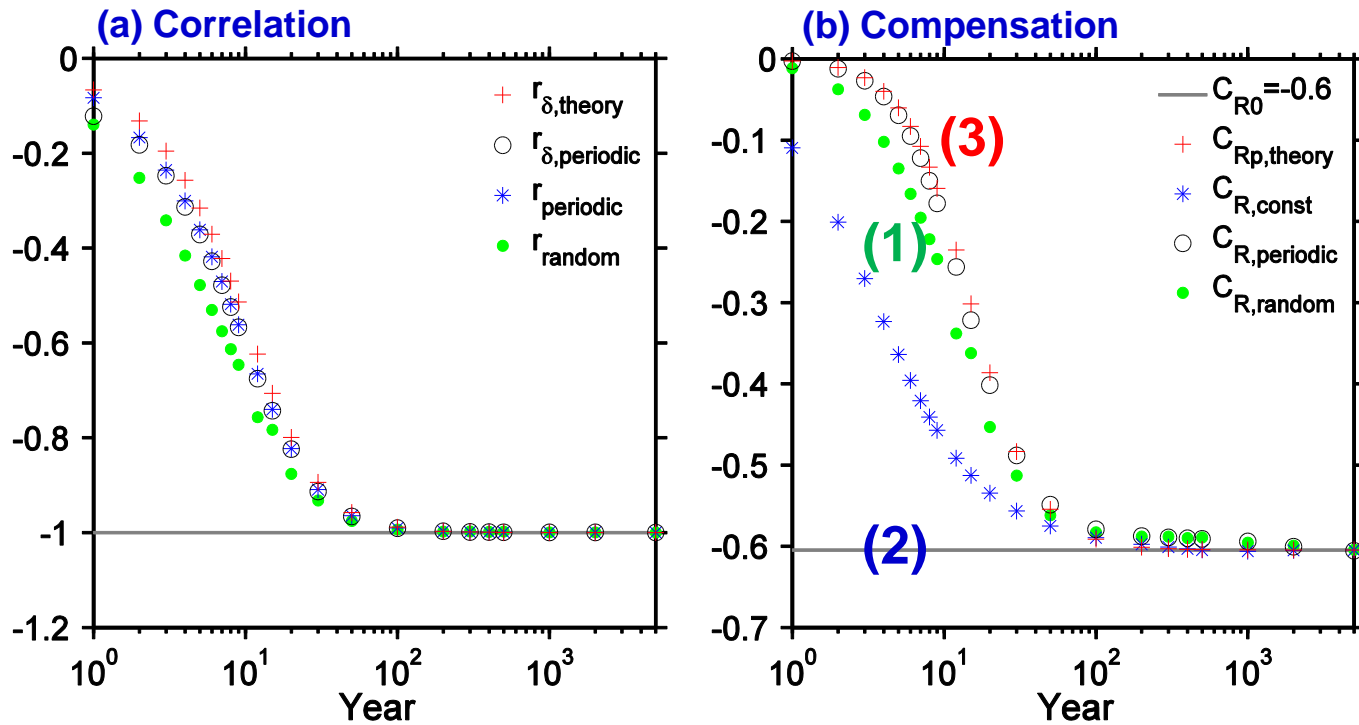

BJC for Climate Variability

Forcing frequency $\omega \rightarrow 0 \Rightarrow$ Equilibrium solution

BJC Theory **Valid** for Climate Variability

Beyond *decadal* timescale, AHT and OHT out of phase, BJC established
